**Adapting Old Lessons for New Skills**

In this application assignment, you will take a traditional lesson plan and consider ways to transform it into a vehicle for teaching using some of the 21st century skills you have learned about in this module.

For the assignment, you may use a lesson plan that you have taught, a lesson that you have seen a supervising teacher lead, or a lesson that you remember from your days as a student. Try to choose a fairly basic and traditional lesson to make your changes and adaptations more interesting.

In the workspace on the next page, provide an outline of the original lesson. Then select which of the 21st century skills you would want to highlight as you adapt the lesson. Think about what new materials or tools, including technology tools, you might want to include, and what instructional strategies you would use. Then write a brief summary of how the revised lesson would progress.

The boxes provided will expand as you type.
